Endemic plant list

Parks and Wildlife Service Tasmania

DEPARTMENT of TOURISM, PARKS
HERITAGE and the ARTS

This plant list is compiled from “An Atlas of Tasmania’s Endemic Flora” (Tasmanian Conservation Trust, 1983).

Tasmania has more than 300 species of endemic plants (endemic plants are found only in Tasmania). More than a third of Tasmania’s endemic plants occur in the Cradle Mountain area and many are closely related to species in New Zealand and South America.

The endemic plants comprise only a small part of the total number of species in the Cradle Mountain area and hundreds of plants growing in this area are native to Australia.
